

Notes 8 December

- deadline for assignment 1 is 16 of December
- UML syntax is important for the final submission so we should include that
- It is *important* to explain our design choices and the reason why we chose to separate the logic to another microservice
- The TA only checks gitlab on Wednesday evening
- Testing is a big part of the grade, so it is important that we have integration tests and a high enough branch coverage
- I think that was it for the meeting notes.
